Professional Summary

MSc Computing Science student at the University of Glasgow (a Russell Group university), looking for my first software engineering role. I spent nine months as an intern at Samsung on their internal MLOps platform, where I managed Kubernetes clusters, kept Docker image repositories in order, and monitored the whole system with Prometheus and Grafana. I write most of my code in Python and C++, I am comfortable on Linux, and I prefer to understand why something is broken before I fix it. I also make a point of writing things down so the next person does not have to start from scratch.

Education

University of Glasgow, Glasgow, UK — Sept 2025 – Sept 2026
MSc Computing Science — Russell Group

Relevant Coursework: Programming and Systems Development, Introduction to Data Science and Systems, Secure Systems Programming in Rust, Cyber Systems Forensics, Human-Centred Security, Enterprise Cyber Security.

Chandigarh University, India — 2021 – 2025
B.E. Computer Science & Engineering — CGPA: 8.14/10

Relevant Coursework: Data Structures, C++, Java, Python, Operating Systems, Computer Networks, DBMS, Software Engineering, Cloud Computing and Distributed Systems.

First-author IEEE publication on AI-powered scalable digital platforms.

Experience

Samsung Electro-Mechanics, Bangalore, India — Oct 2024 – Jun 2025
Student Intern (Kubernetes & ML Engineer)

- Deployed and managed Kubernetes clusters for multi-team ML workflows across dev and prod, handling provisioning, image updates, and day-to-day operations.
- Built and integrated the pado_mlops Python package into the internal SEMLOPs platform, automating pipeline deployment end-to-end.
- Monitored distributed systems with Prometheus, Grafana, and Kibana, triaging anomalies and maintaining operational visibility.
- Owned container image repositories (JFrog in dev, Harbor in prod)—cleanup, hygiene, and access control—for secure, scalable deployments.
- Wrote the user manual and built the admin manual from scratch (with Korean drafts), documenting systems and processes for the wider team.

VANKADEL (UK, Remote, Pro-bono) — Oct 2025 – Dec 2025
Threat Intelligence Analyst (Part-time)

- Owned tasks end-to-end, working independently to a rigorous quality standard while coordinating with a remote team.
- Produced clear, concise documentation and reports supporting both strategic and operational decision-making, applying root-cause thinking throughout.

Zooniverse (Remote, Volunteering) — Apr 2026 – Jun 2026
Data Annotation & Classification Contributor

- Completed 4,689 high-precision classifications across 10 scientific projects, demonstrating sustained attention to detail and consistent data quality.
- Applied pattern recognition and systematic feature identification to build reliable ground-truth datasets feeding machine-learning pipelines.

Projects

install-k8s-tui GitHub

Rust, ratatui, dialoguer, clap

- Built a Rust TUI that generates ready-to-run Kubernetes installation scripts across 5 distributions (kubeadm, k3s, minikube, kind, MicroK8s).
- Supports interactive and fully CLI-driven automation with configurable container runtimes, CNI plugins, and addons, generating Bash and Windows PowerShell output.
- Ships as a single zero-dependency binary with cross-platform releases and CI/CD via GitHub Actions.

Personal Portfolio Live Site | GitHub

HTML, CSS, JavaScript, Three.js, PWA, GitHub Pages, Cloudflare

- Built and deployed a zero-framework static site (5,500 lines of vanilla HTML/CSS/JS) across 11 pages with six 3D scenes, PWA offline support, and dark mode.
- Configured custom domain, DNS, and CDN on Cloudflare, with SEO, self-hosted analytics, and security hardening (CSP, SRI, XSS sanitisation).

SIEM Homelab (ELK Stack) GitHub

Elasticsearch, Logstash, Kibana, Ubuntu, Windows

- Architected and deployed a three-machine monitoring lab—a central ELK server ingesting logs from an Ubuntu agent and a Windows host.
- Configured Kibana dashboards, log visualisation, and custom alert rules, exercising real-world observability and incident-detection workflows.

Publication

Advance Approaches in AI-Powered Website Development for Educational Delivery via Ed-Tech

Certifications & Awards

- CoSE My Future Skills Award — University of Glasgow College of Science & Engineering (May 2026)
- Cloud Skill Boosts Level 2: Kubernetes — Google (Mar 2024)
- Deploy Kubernetes Applications on Google Cloud (Intermediate) — Google (Jul 2023)
- Google Cloud Fundamentals: Core Infrastructure — Google (Jul 2023)

Technical Skills

- **DevOps & Infrastructure:** Docker, Kubernetes (GKE), Container Registries (Harbor, JFrog), CI/CD (GitHub Actions), Linux/UNIX, Cloudflare, GitHub Pages
- **Monitoring & Observability:** Prometheus, Grafana, Kibana (KQL), ELK Stack, Log Collection & Analysis
- **Programming:** Python, C++, Rust, Java, C# / .NET, SQL (BigQuery)
- **Cloud:** Google Cloud Platform, Compute Engine, VPC, IAM, Pub/Sub, Cloud Storage
- **Analytical & Delivery:** Root Cause Analysis, Troubleshooting, Documentation & Technical Writing, Data Analysis, Agile (Scrum), Jira, Confluence, Bitbucket

Soft Skills

Analytical Thinker | Self-directed | Team Player | Written Communication | Fast Learner

Additional

Languages: English (Fluent), Hindi (Native)
Right to Work in the UK

Interests: Chess, Reading, Music
Open to Relocate across the UK
